

System Constraint/Outage Notice

August 2019 Capacity

The expected range of Northern Border Operationally available capacity for August will be determined on a day to day basis after careful consideration of scheduled outages as well as operational limits of the NBPL system. As always, Northern Border will determine and post its estimated daily operational capacity in advance of the nomination deadline for such gas day.

Outage Information

Most outages potentially reduce capacity. Northern Border attempts to schedule outages so that contracted firm capacity is not impacted. The risk that an outage will reduce capacity is described below. Such risk is always applicable to both the day of the outage and the day(s) following the outage. Risks are defined to be low, moderate, or high depending on the complexity of the work to be done and the expected time required.

7/31/19 to 8/1/19 – Manhattan South to North Hayden pigging – low risk to operational capacity and low risk to contracted capacity

Northern Border reserves the right to revise the above listed schedule.

Please contact your Northern Border Nominations Representative with any questions regarding nominations or scheduling at (888) 750-6275.

Please contact System Operations with any questions regarding operations or facilities.
